

EXTOL Business Integrator

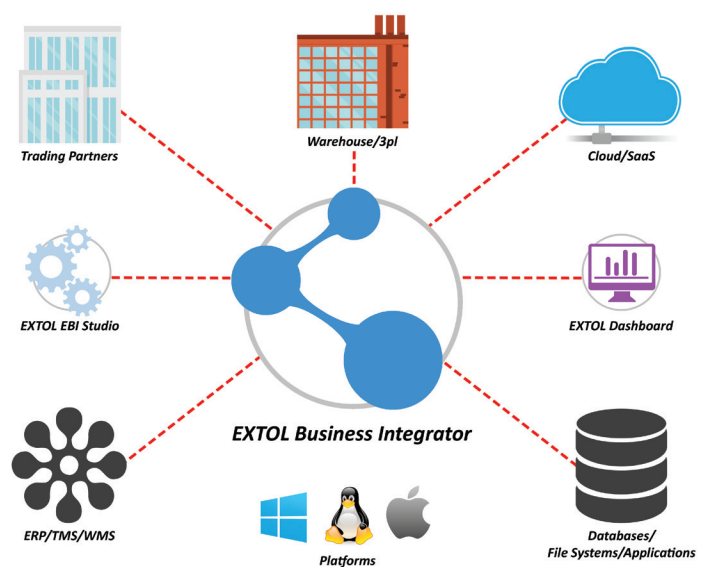

Accelerate B2B, Application, Data, and Cloud Integration Results

EXTOL Business Integrator (EBI) is a highly available and scalable integration platform that fulfills a wide variety of business integration requirements without custom coding. It supports Business-to-Business, Application, Data and Cloud integration with one investment in middleware, tools and skills.

EBI is designed to replace conventional EDI translators, mapping tools, XML integrators, data integration tools, and web services toolkits. It integrates seamlessly with your existing applications, data, and business processes. You can use EBI to create simple, point-to-point connections that automate parts of larger processes, or to implement longer, more complex integration applications that connect and synchronize in-house application software, trading partners, Cloud applications and services, and business data resources, in any combination.

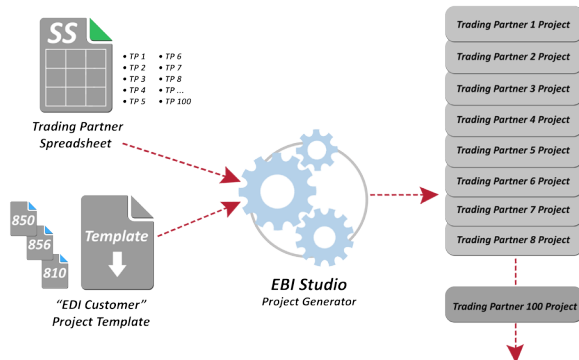

EBI provides you with:

- **Transformation and integration** – Use built-in or customizable document routing to transform any combination of X12, EDIFACT, Flatfile, SpreadSheet, XML and database data.
- **Business Process Automation** – Business processes can be activated on demand, by schedule, or triggered by external or application resources.
- **Service availability and scalability** – Highly available and scalable services backed by clustering and fail-over provide 24x7 operability.
- **Secure Communications** – Business data and communication sessions are protected through standard secure communication and encryption technologies.
- **Trading Partner awareness** – Manage trading partners, document types, business processes and individual transaction status.
- **Visibility** – Access to business documents throughout the enterprise is enabled by a web-based dashboard.
- **Customizable application interaction** – Use prebuilt solutions for JD Edwards, SAP and Oracle or build custom interactions with any other application or package.

EBI features to enable your business goals:

- **Data formats** – Optimized for EDI B2B integration, application integration is enabled through native support for XML, FlatFile, Spreadsheet(.xls & .xlsx) and database formats.
- **Rule-based mapping** – Transformation of documents is performed only according to rules you define for maximum control and flexibility.
- **Reusability** – Build business processes one time and apply it to many trading partners for maximum development efficiency.
- **Project Generator** – Designed by and for integration professionals, trading partner onboarding activity is reduced by as much as 50% by generating maps, communications and routing from sample data and project templates.

- **Integration Dashboard** – Web-based document inquiry by key business values enables CSR and Operations Teams instant access to EDI document data and status.
- **Clustering and fail-over** – Add redundancy, fail-over and capacity to communication, routing and processing nodes to eliminate single points of failure and align with corporate DR strategies.
- **Application Integrators** – Application Integrators for JDEdwards, SAP and Oracle ECG jump start your project with prebuilt maps, routes and business processes.

- **EDI with Acknowledgements** – Native support for EDI provides configurable levels of data validation against supplied X12 and EDIFACT Standards with automatic acknowledgement generation and remittance.
- **Secure communications** – Supports a full range of secure communications protocols, including:
 - AS2 (Drummond Certified)
 - FTP, SFTP, and FTPS
 - Web Services, SOAP/HTTP, REST/HTTP

Benefits to enable your business goals:

Say 'Yes!' to new business

- Any to any transformation
- Broad, secure communications support
- Quick on-boarding with Project Generator
- Service availability and reliability
- Scalable document throughput
- Strategic partner prioritization

Exceed customer expectations

- Quickly on-board new document types with Project Generator
- High service availability
- Immediate acknowledgement remittance
- Scalable document throughput
- Quick response time to common inquiries
- Secure data transport and encryption

Focus on projects, not support

- Enterprise access to business documents
- Platform stability and reliability
- Distributed architecture for DR
- Reduce development activity with Project Generator
- Single skill set, no coding required
- Build once and reuse paradigm
- Built in routing for EDI projects
- Application Integrator quick start

Business process and exception management:

In every business, it is a challenge to manage processes and exceptions as part of your daily operations. Common points of failure you may encounter are bad data, communication issues, translation and even internal system problems. EBI provides the tools to manage and monitor active, completed and failed processes.

Business Process Management:

- Script templates
- Internal scheduling system
- Notification API
- Nested processes
- View of active processes, down to the process step
- Dashboard view

Exception Management:

- User-defined process flow to alert or call attention to errors
- Business Process Engine Status API
- Processing Exit Points
- Define failure points

System requirements:

EBI comes with everything you need to construct and maintain a solid integration platform. The package includes the EBI Server, Dashboard Server, and the EBI Studio. EBI can be licensed based on your specific integration needs, such as document types, or number of maps.

EXTOL Business Integrator

Processor	Multi-core 64-bit Intel / AMD
OS	Windows: Studio and Server Linux: Server only Mac OS X: Server only
RAM	Server: 6 GB or greater Studio: 2 GB or greater
Disk space	Server: 4 GB (SSD recommended)
Other	Minimum 1280x1024 resolution monitor
